OPTERIUM™ System Characteristics

SaaS and PaaS platform that supports our customers in the MEA region and to align with vision 2030 in KSA by its new state-of-the-art Artificial Intelligence based technologies made in KSA

Predictive Analytics

Machine learning algorithms to analyse data capable of generating predictive insights that can help stakeholders proactively mitigate risks

Compliance Reporting

A platform that can provide comprehensive reports compliant to the governing body in a daily, monthly, and yearly basis.

Comprehensive Monitoring

Real-time monitoring of a range of conditions, such as air quality, seawater cooling, area noise, and more, providing a comprehensive view of conditions in a given area

Improved Accuracy & Efficiency

Automating data collection and processing can benefit streamline monitoring processes and reduce the time and resources required to monitor conditions

Customizable Platform

Ability to monitor a range of conditions, such as air quality, seawater cooling, area noise, and more, providing a comprehensive view of conditions in a given area

Sustainable

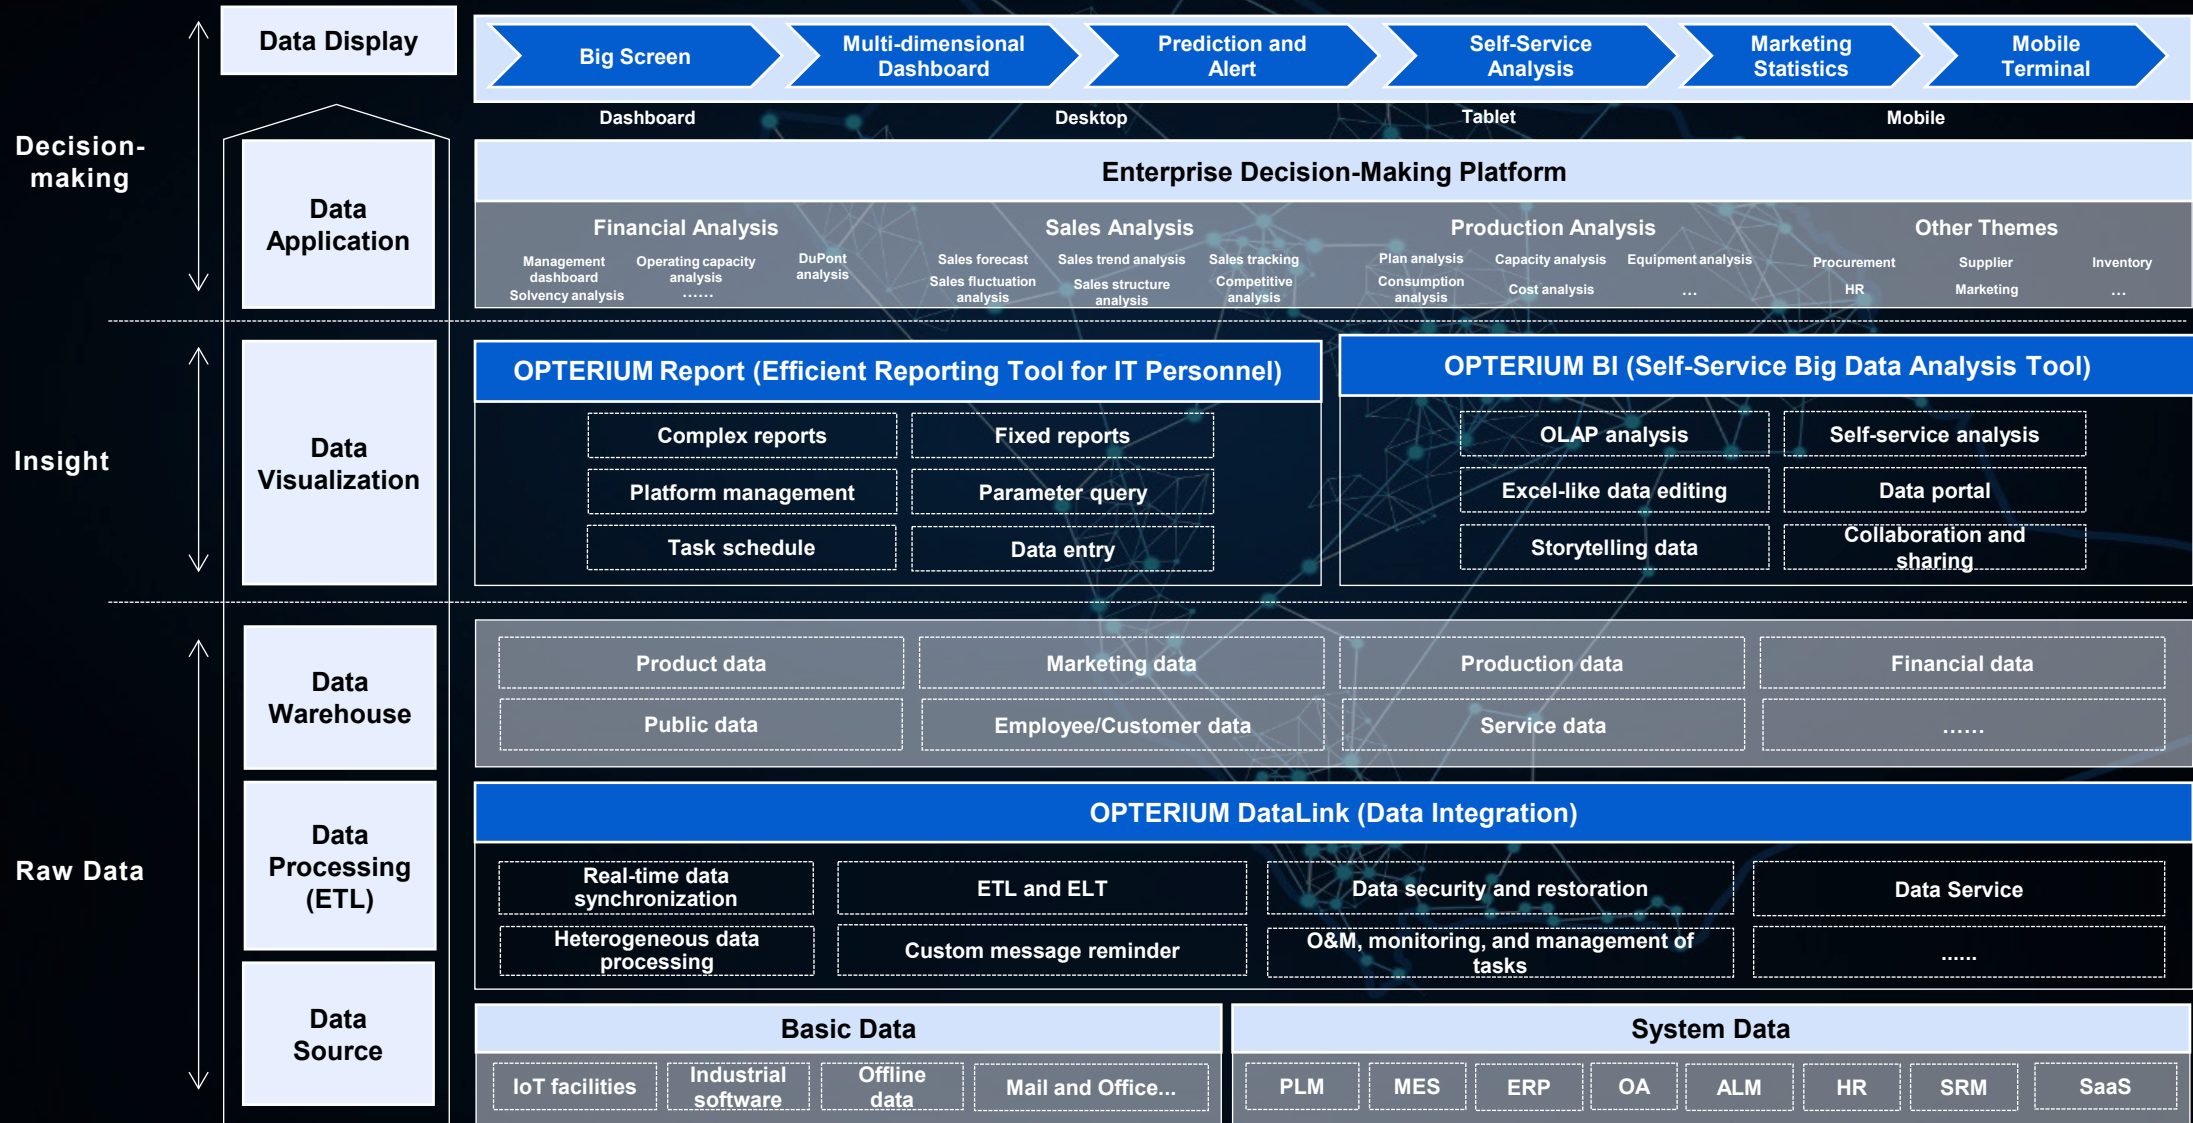

Providing real-time monitoring and predictive analytics, an AIoT platform that can help stakeholders proactively identify and mitigate risks, promoting sustainability and protecting natural resources

Functional Architecture of OPTERIUM Product

Optimizing the entire data chain from raw data to application to enhance enterprises' decision-making capabilities.

What makes us unique?

Seamlessly Integrated With Existing Systems

Agnostic and interoperable

A Unified Platform

Single-plane of glass access to all solutions

Flexible Business Models

- Optimize OPEX and CAPEX
- SaaS/PaaS

Local Content

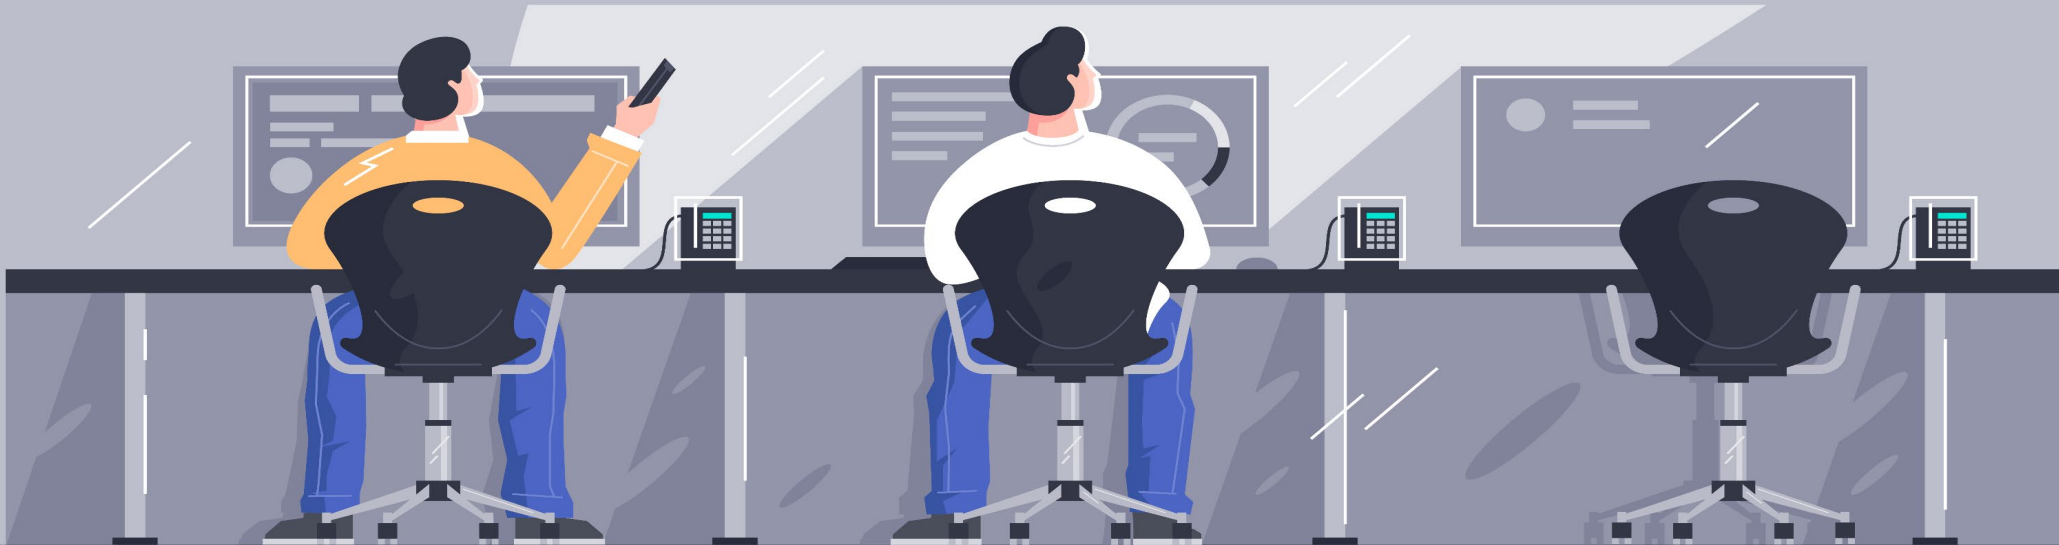

Made in Saudi Arabia and located in Saudi Arabia

Modular to Encapsulate with Different Platforms

Tailor-fit solutions to meet our clients' requirements
